

Why Did Khairy, Health Minister & DG Fail Invite The World's Leading Team On Ivermectin To Save Malaysian Lives, When So Many Are Dying?

By Matthias Chang – Future Fast-Forward

The rakyat is pissed off hearing / reading about the hundreds of thousands of new cases (cumulatively since March, 2020) and deaths every day, but not one clue why 469,325 recovered as at Friday, 28.5.2021 without vaccination.

No iron-clad evidence have been adduced that some or all of the 469,325 “recovered cases / patients” were saved by the RM5Billion worth of vaccines. We stand to be corrected, that no patients hospitalised since March 18th, 2020 to 25th February, 2021 were vaccinated but nevertheless recovered and discharged from hospitals and quarantine centres. Likewise, from 25th February, 2021 till May 31 2021. Otherwise, this would be Headlines News in all the MSM.

What have we to lose by inviting medical colleagues, top experts in this field in the world to come to Malaysia, when this Covid19 evil scourge has been categorised as a “Global Pandemic” and all of us, the global community must unite to defeat Covid19.

Are we so arrogant to say that we can solve this crisis by ourselves, when Malaysia has not researched and produced one single vial or dose of vaccine and or other drugs to be administered to those inflicted and infected with the virus! Zilch!

Even “Malaysia Boleh” has its limits. We must be humble!

It seems that we are that arrogant and conceited. So, while waiting for the illusive “herd immunity” through vaccination, there is nothing we can do to save the lives of those hospitalised - just the feeding of negative news day in, day out. And the stooges stand on the Bully Pulpit, declaring that under their care, all is well and somehow or other, the Covid19 virus will cease to infect on the day or date of their proclamation – that “herb immunity” has been achieved. This is Voodoo science.

Even the arrogant USA, UK and EU have not achieved “herd Immunity” (for that matter to achieve the target of 80% of their population to be vaccinated) anytime in 2021). None till today, even as they monopoised and hoarded the vaccines since the beginning of 2021. In fact USA boasted they have a surplus stock of vaccines. And in the case of the AstraZeneca vaccine (still not approved by the FDA for Emergency Use as at 31st

May, 2021) President Biden has declared that the unapproved AstraZeneca vaccine will be distributed to the Third World countries. The rejects are given out like the proverbial Santa Claus giving out presents! Height of arrogance!

As a former political secretary to the fourth Prime Minister, I can vouch that the PN government under the combined leadership of the Yang di-Pertuan Agong and the Prime Minister, will have a landslide victory at the next General Elections on or before 2023, when medicines used by our colleagues in over 20 countries, eg Ivermatin etc are administered to each and every Malaysian infected with Covid19 (whether hospitalised or not). Covid19 cases will collapse and those who are severely inflicted would be cured!

The Yang di-Pertuan Agong and the Prime Minister will be hailed as heroes for saving Malaysia, and the rakyat will celebrate the miracle granted by God and give thanks and appreciation by conferring a landslide victory!

The alternative, following the road of failures plotted by Khairy, the Health Minister and the DG, will be total defeat at the next elections.

The end game will commence 15th June, 2021 as warned in my earlier message.

To help our country, ***I will now detail the team of doctors that Malaysia needs.***

Ignore this medical intelligence at your peril. Total defeat and collapse of our beloved country will be the dire consequence.

Below is an extract of the Article “The Drug That Cracked Covid” by Michael Capuzzo with all the names of the MEDICAL TEAM PIONEERING IVERMATIN HIGHLIGHTED IN RED AND BOLD and numbered (1) to (8)

Start of Extract

“When people get infected,” the Times said, “the best that doctors can offer is supportive care”.

Even with the rollout of vaccines, they are “not the whole answer,” Dr Francis Collins, director of the NIH, said recently on 60 Minutes,

“We need treatments for those people” says,

(1) Dr, Paul Marik, sixty-three, the endowed professor at the **Eastern Virginia Medical School and a world-renowned clinician-researcher**,

The legendary professor, a 6-foot, 230-pound, balding, barrel-chested, bear of a man with a crisp native South African accent touched with the South after thirty years, **is the second most published critical care doctor in the history of medicine, with more than 500 peer-reviewed papers and books, 43,000 scholarly citations of his work, and a research “H” rating higher than many Nobel Prize winners.**

Marik is world famous as creator of the “Marik Cocktail,” a revolutionary cocktail of cheap, safe, generic, FDA-approved drugs that dramatically reduces death rates from sepsis by 20 to 50 per cent anywhere in the world – whether you’re in a hospital in Zurich or Zimbabwe, Chicago or Chengdu – down to near zero, when given soon after presentation to hospitals. Since he published what he calls the “HAT Therapy” in 2016 in the most prestigious peer reviewed journal in the field. Marik has received worldwide publicity,

He is seen in ICUs around the globe as a historic figure in medicine for improving care of sepsis, which last year passed cancer and heart disease as the world’s number one killer, according to Lancet.

At the Sentara Norfolk General Hospital, a large, 563-bed teaching hospital on the EVMS campus, Marik, head of pulmonology and critical care, was treating hundreds of critically ill COVID-19 patients,

He made YouTube videos instructing doctors and hospitals all over the world on treating COVID-19, sending out a daily EVMS COVID-19 Management Protocol online for doctors worldwide,

Paul Marik had a different movie in his head. He was startled and appalled that all the national and international public health agencies recommended that **the most well-trained, well-equipped doctors in history stand down and wait on big pharma’s lab scientists while the worst pandemic in a century devastated the world.**

It’s therapeutic nihilism to say that doctors can do nothing,” Marik said. Supportive care is no care at all.

What Marik did was assemble four of his closest friends, who also happened to be four of the top academic critical care doctors in the world.

He challenged them to join him by developing low-cost generic therapies that countless poor people all around the world would need, which he saw from the beginning, or face a coming catastrophe without treatments or vaccines.

Pulmonary critical care specialists often lead medical teams at hospitals in a crisis. **“Lungs are the most common organ that fails in the ICU and in the context of many diseases,”** says **(2) Dr. Pierre Kory, Marik’s protégé.**

“Pulmonary critical care physicians (are) ... the most widely skilled, and the most knowledgeable and experienced in all facets of disease and all levels of severity to the extent that no other doctor comes close.”

Marik had assembled a group of intensivists with nearly 2,000 peer-reviewed papers and books and over a century of bedside experience in treating multi-organ failure and severe pneumonia-type diseases. If anyone could arrest the coronavirus in a living patient, they could.

Marik turned to his dearest colleague in medicine in Houston, **professor and doctor (3) Joseph Varon,** a Mexican American with academic appointments in both his countries that have included the **University of Texas Health Science Center.**

Marik also recruited renowned **(4) Dr. Gianfranco Umberto Meduri,** an Italian, professor at the **University of Tennessee Health Science Center in Memphis, the father of noninvasive intubation and world authority on steroid treatment of ARDS (Acute Respiratory Distress Syndrome) and Covid-19.**

(5) Dr. Jose Iglesias, from Cuba, a highly published associate professor of medicine at **Hackensack Meridian School of Medicine in Seton Hall, New Jersey, and director of one of that state’s largest dialysis centers.**

Peirre Kory, a big passionate doctor-scientists like Mark, and his protégé. Kory was a highly published former associate professor and critical care service chief at **the Univeristy of Wisconsin-Madison and the director of the Trauma and Life Support Center at University Hospital, one of the top academic medical centres in the world.**

Marik, Meduri, Varon, Iglesias and Kory – four brilliant immigrants from South Africa, Italy, Mexico, Cuba, and one brash New Yorker – are the finest Covid-19 clinician-researchers of the pandemic.

It was based on the idea that Covid-19 has one great weakness: **the coronavirus doesn’t kill anybody. In a mechanism so diabolical Marik believes “human beings aren’t smart enough to have figured it out,” the trillions upon trillions of coronavirus that over whelm and sicken the host don’t kill it. But in the second week of the disease, all the coronaviruses die, and like suicide bombers flooding out of a Trojan Horse swamp the body with a “vast vital graveyard” that triggers a friendly-fire hyper-immune response that in turn unleashes monstrous multi-organ inflammation and clotting like doctors have never seen.**

“As pulmonary critical care doctors we know how to treat inflammation and clotting, with corticosteroids and anticoagulants,” Marik says. “It’s first-grade science.”

They achieved remarkably high survival rates at their hospitals at a time when 40 to 80 percent of patients in the U.S. and Europe were dying from the disease. **Their success was achieved with the group's now-famous MATH+ protocol for hospitalised Covid-19 patients.**

The cocktail of safe, cheap, FDA-approved genetic drugs – the steroid Methylprednisolone, Ascorbic Acid (Vitamin C), Thiamine (Vitamin B1), and the blood thinner Heparin – was the first comprehensive treatment using aggressive corticosteroid and anti-coagulant treatments to stop Covid-19 deaths.

They would eventually call I-MASK). It is centered around the drug Ivermectin, which President Trump used at Walter Reed hospital, unreported by the press, though it may well have saved the president's life while he was trotting other drugs.

The doctors published their breakthroughs in real time on the website of their nonprofit research group, the **Front Line Covid-19 Critical Care Alliance**, so doctors anywhere in the world could find them and use them immediately.

Marik, Kory, Varon, Meduri, and Iglesias became heroes of the pandemic to intensivists around the globe who used their protocols to save thousands of lives

St. Francis Medical Center in Trenton, New Jersey, where Dr. Eric Osgood posted the MATH+ protocol on a private Facebook group for thousands of ICU doctors after it stopped the dying in his hospital, and talked it up with his colleagues around the nation.

Marik and his colleagues receive more than five hundred emails a day from doctors and patients begging to help to beat Covid-19,

Many prominent doctors and scientists around the world believe that Marik, Kory, Meduri, Varon, and Iglesias deserve the Nobel Prize in medicine.

Emmy Award-winning publicist Joyce Kamen of Cincinnati and former CBS News correspondent Betsy Ashton of New York City set aside their lives and began working tirelessly to reach every famous TV newscaster, scientist, and public health expert you know and hundreds you don't, the handful of science writers who have won Pulitzer Prizes, the five thousand science writers on a special news wire who haven't,

But, nobody responded.

Marik thought it might be a good idea if doctors who were actually saving lives with treatments that could save almost everybody could spend a few minutes on the podium sharing their knowledge with the world after Trump made his speeches

“People are dying needlessly,” Marik said. “We’ve cracked the code of the coronavirus.”

Nobody seemed to care!

Kory even Testified to the Senate on May 6, 2020

Oxford University Recovery Trial proved that the FLCCC doctors were right, and corticosteroids became the accepted worldwide standard of care, changing the trajectory of the pandemic. Now, millions of deaths later, steroids remain “the only therapy considered “proven” as a life-saving treatment in Covid-19, he says and only in “patients with moderate to severe illness.”

All the non-vaccine big pharma designer treatments for Covid-19 have largely failed to show an impact on mortality, Kory says, including Remdesivir and monoclonal antibody therapy.

Dr. Marik had found exactly what Dr. Fauci was seeking. The discovery astounded him.

He picked up a surprising “data signal” in October from emerging studies in Latin America. Ivermectin, a safe, cheap, FDA-approved anti-parasitic drug, was showing remarkable anti-viral and anti-inflammatory activity as a repurposed drug – the most powerful Covid-19 killer known to science.

He knew the drug as a core medicine on the WHO Model List of Essential Medicines, and it is well established in the literature as a “wonder drug” that won the 2015 Nobel Prize for its discoverer, Japanese microbiologist Satoshi Omura, for nearly eradicating two of the “most disfiguring and devastating diseases” in history, river blindness and elephantiasis, that had plagued millions of people in Africa countries, one of the great achievements in the history of medicine.

An over-the-counter medicine in France, Ivermectin is safer than Tylenol and “one of the safest drugs ever given to humanity,” Dr. Marik said, with “3.7 billion does administered in forty years, that’s B for billion, and only extremely rare serious side effects.”

Antiviral Research, showed that Ivermectin, which blocked other RNA viruses like Dengue virus, yellow fever virus, Zika virus, West Nile virus, influenza, the Avian flu and HIV1/AIDS in vitro, decimated the coronavirus in vitro, wiping out “essentially all viral material by 48 hours.

But by October Marik’s concerns were answered. The studies were well-designed university trials that showed amazing anti-Covid-19 activity at the normal doses used to treat parasites.

The Ivermectin studies were a mosaic of hundreds of scientists and many thousands of patients in trials all over the world, all showing the same remarkable efficacy against all phases of Covid-19 no matter what dose or age or severity of the patient.

“Penicillin never was randomized,” Marik says. “It just obviously works. Ivermectin obviously works.”

“if you were to say, tell me the characteristics of a perfect drug to treat Covid-19, what would you ask for?”

“I think you would ask firstly for something that’s safe, that’s cheap, that’s readily available, and has anti-viral and anti-inflammatory properties. People would say, “That’s ridiculous. There could not possibly be a drug that has all of those characteristics. That’s just unreasonable. The drug is called Ivermectin.”

If it were universally distributed at a dose that costs ten American cents in India and about the cost of a Big Mac in the United States, he said, Ivermectin would save countless lives, crush variants, eliminate the need of endless big pharma booster shots, and end the pandemic all over the world.

There were no effective, lifesaving, approved Covid-19 treatments that doctors had used to slow down or stop the coronavirus in the history of the pandemic, in any phase of the disease, except the one, corticosteroids, that Marik and company had discovered.

Now they had discovered another treatment, even more powerful, that could save the world.

Surely, Marik thought, the world would listen this time.

The world was diverted to Remdesivir which costs \$3,000 a dose. It is the only anti-viral treatment

It has been shown in studies to have no mortality benefit for Covid-19 patients. The NIH Covid-19 Treatment Guidelines Panel acknowledges in financial disclosures that they have received research support or consultant payments from Gilead, or sit on the advisory board of the \$60 billion company).

“Remdesivir may not cure coronavirus, but it’s on tract to make billions for Gilead.”

Kory is a Covid fixer. He went to Covid-19 wracked hospitals during outbreaks, when patients were dying and doctors were overwhelmed, with the mission to stop the dying and restore order to the ICU. **When the pandemic hit, Kory helped prepare the university hospital in Madison to handle a forecast surge. Then he went east to help save New York City when death rate exceeded that of the medieval plague, taking over as the ICU attending chief at the main Covid ICU at Mount Sinai Beth Israel Medical Center.**

“I’m a lung specialist, I’m an ICU doctor. My city is being destroyed by the worst pandemic in a century, and it’s a lung disease, all my friends, the ICU

chiefs who trained me and the ones I trained, they're going out of their minds, people are dying. Are you kidding me? I went to New York to save lives"

American Journal of Therapeutics, presented a mountain of data showing that Ivermectin stopped all phases of Covid-19. It stated:

"should be systemically and globally adopted... for both the prophylaxis and treatment of Covid-19."

Among the 788 who got Ivermectin, "no infections were recorded."

It's a scientific recommendation based on mountains of data that has emerged in the last three months... from many centres and countries around the world showing the miraculous effectiveness of Ivermectin. It basically obliterates transmission of this virus. If you take it, you will not get sick."

Kory had been working with a senior data scientist in Boston named Juan Chamie, who discovered that Ivermectin dropped case and death rates off the cliff in numerous regions around the world.

Uttar Pradesh, India with 232 million people mass distributed Ivermectin to 200 million people last fall and by winter was reporting few if any deaths in the country.

But cases and deaths plummeted

Kory's data was corroborated by **(6) Dr. Andrew Hill, a renowned University of Liverpool pharmacologist** and independent medical researcher, and the senior World Health Organization/UNITAID investigator.

He reported that, after nine months of looking for a Covid-19 treatment and finding nothing but failures like Remdesivir – "we kissed a lot of frogs" – **Ivermectin was the only thing that worked against Covid-19, and its safety and efficacy were astonishing - "blindingly positive," Hill said, and "transformative."** Ivermectin, the WHO researcher concluded, reduced Covid-19 mortality by 81 percent.

"We have 100,000 patients in the hospital right now dying," he cried out to the committee. "I'm a lung specialist, I'm an ICU specialist. I've cared for more dying Covid patients than anyone can imagine.

Eighty-five-year old Nobel Prize winner (7) Satoshi Omura in Japan, a legend in microbiology, promptly asked his research team to translate Kory's paper into Japanese to be placed on his institute website.

Physicians from the Ministry of Health in Zimbabwe on January 27, 2021, obtain permission to treat Covid-19 with Ivermectin; case fatalities dropped in one month from seventy a day to two a day, "and our hospitals are virtually empty," said Dr. Jackie Stone, who was subsequently taken in for questioning for her use of a controversial drug. In Phnom Penh, Cambodia, a doctor trained in Milwaukee, Wisconsin, was using Kory's data to persuade the Ministry of

Health of Ivermectin's efficacy and was making a personal appeal to the king. "Thank you for your amazing courage and love for humanity," he wrote. "You're real doctor who is living up to the Hippocratic Oath. All doctors need to follow your example!!"

In Bath, England, (8) Dr. Tess Lawrie, a prominent independent medical researcher who evaluates the safety and efficacy of drugs for the WHO and the National Health Service to set international clinical practice guidelines, read all twenty-seven of the Ivermectin studies Kory cited.

"The resulting evidence is consistent and unequivocal," she announced, and sent a rapid meta-analysis, an epidemiological statistical multi-study **review considered the highest form of medical evidence**, to the director of the NHS, members of parliament, and a video to Prime Minister Boris Johnson with "the good news... **that we now have solid evidence of an effective treatment for Covid-19...**"and **Ivermectin should immediately "be adopted globally and systematically for the prevention and treatment of Covid-19."**

BIRD Conference – British Ivermectin Recommendation Development – with more than sixty researchers and doctors from the US, Canada, Mexico, England, Ireland, Belgium, Argentina, South Africa, Botswana, Nigeria, Australia and Japan. They evaluated the drug using the full "evidence-to-decision framework" that is "the gold standard tool for developing clinical practice guidelines"

Ivermectin should blanket the world.

"With a moral duty to help people, to do no harm, and to save lives. Please may we start saving lives now."

She heard nothing back.

Dr. Chesler explained that facing the choice with his elderly Covid-19 patients to "either provide my patients with the standard of care, basically first aid, with Tylenol, oxygen and monitoring, until they became sick enough to be sent to the hospital, or to try something more proactive with the hope of the patients not becoming so ill and then losing their lives," he has since successfully treated "over 200 high risk Covid patients" with Ivermectin, many over 100 years old, with none dying or needing "heroic" oxygen support.

Fauci never replied.

The WHO, NIH and other public health agencies ... thrown out all the other time-tested forms of clinical and scientific medical investigation still taught in all the medical schools, such as observational trials (which had eliminated widespread crib death), case histories, and anecdotes. They also restricted the use of essential off-label and generic drugs with blatant disinformation campaigns that reminded Kory of big tobacco's efforts to hide the dangers of smoking. In effect, the public health authorities eliminated the full toolbox of essential scientific methods and drugs that doctors use every day; including the most effective early, prophylactic, and late-state

treatments for Covid-19, which were **developed by frontline doctors, not pharmaceutical companies.**

....That all medical research is secondary to the doctor's clinical judgement in the moment, whether the patient is dying of Covid-19 or giving birth.

The doctor is morally compelled to use their best clinical judgement and the "best available **evidence**" **in that instant, not tomorrow or next year when more data is published. As the WMA puts it: "The health of my patient will be my first consideration."** Clearly the medical establishment is now routinely violating that ancient oath, Kory says, and as a result he "feels estranged from most, but not all, of my colleagues.

"All the gods of science and medicine" as Marik calls them, descended to crush the little Nobel-Prize willing pill.

A news blackout by the world's leading media came down on Ivermectin like an iron curtain. Reporters who trumpeted the Covid-19 terror in India and Brazil didn't report that Ivermectin was crushing the P-1 variant in the Brazilian rain forest and killing Covid-19 and all variants in India. That Ivermectin was saving tens of thousands of lives in South America wasn't news, but mocking the continent's peasants for taking horse paste was. Journalists denied the world knowledge of the most effective life-saving therapies in the pandemic, Kory said, especially among the elderly, people of color, and the poor, while wringing their hands at the tragedy of their disparate rates of death.

On January 12, 2021, the Brazilian Ministry of Health tweeted to its 1.2 million followers not to wait with Covid-19 until it's too late but "go to a Health Unit and request early treatment," only to have Twitter take down the official public health pronouncement of the sovereign fifth largest nation in the world for "spreading misleading and potentially harmful information." (early treatment is code for Ivermectin.) On January 31, the Slovak Ministry of Health announced its decision on Facebook to allow use of Ivermectin, causing Facebook to take down that post and removed the entire page it was on, the Ivermectin for MDs Team, with 10,200 members from more than 100 countries.

In Argentina, Professor and doctor Hector Carvallo, whose prophylactic studies are renowned by other researchers, says all his scientific documentation for Ivermectin is quickly scrubbed from the Internet. "I am afraid", he wrote to Marik and his colleagues, "we have affected the most sensitive organ on humans: the wallet ...". As Kory's testimony was climbing toward nine million views, YouTube, owned by Google, erased his official Senate testimony, saying it endangered community. Kory's biggest voice was silenced.

Note: FDA, the budget of which, as it happens, is 75 percent funded by big pharmaceutical companies.

More than twenty countries representing some 20 percent of the Earth's population use Ivermectin, many in their national protocol.

...“a game changer for India and for the world,” the surgeon said. Ivermectin “saved India in 2020 after it got official permission in Uttar Pradesh.

“We BEG health agencies and mainstream media in other countries,” the Indian doctor wrote, “NOT to give BAD PROPAGANDA of Ivermectin. Ivermectin is saving India and Africa.”

“The sadest thing for us is we know this can make a difference and save lives,” Marik says, “and it seems like nobody really cares and wants to listen to us.” But “we feel we can't be silenced, we just can't be, because you know the truth will ultimately prevail.”

END OF EXTRACT

Having read the above, I dare challenge anyone in Malaysia, who is not a true believer and God fearing, to come forward to state that the above mountain of data and peer reviewed journals and official state agencies' findings are NOT SCIENCE but trash and or conspiracy theories.

If this article is not followed by concrete action by the stooges responsible for saving lives in Malaysia, do nothing and ignore this warning, I will do the following:

I will lodge a Police Report against all the stooges for whatever crimes that they can be charged including manslaughter, under our Penal Code;

I will contact all my international friends to help file charges under the Nuremberg Principles that these stooges have committed crimes against humanity and that they be brought before the International Criminal Court to be tried;

I will seek help from the global community to lodge Red Notices with INTERPOL FOR THEIR ARREST SHOULD THEY TRY TO ABSCOND FROM MALAYSIA.

I WILL START A NATIONAL MOVEMENT TO REQUEST THE YANG DI- PERTUAN AGONG TO DESIGNATE THEM AS PERSONA NON GRATA AND DEPORT TO FACE INTERNATIONAL JUSTICE.

This is my final warning. Countdown starts on 15.6.2021

God bless us all and let us all pray for God's mercy and compassion that we may rid this country of Covid19 and the scumbags that are responsible for the unnecessary deaths of innocent victims.
