

# How Will *The Empire* Collapse?

By Matthias Chang – Future Fast-Forward

## Fundamental Principles

The Empire that I am referring to is the first and only Global Empire – “**The Zionist Anglo-America Empire**”!

Look at the world map and you will agree. The key word is **GLOBAL**. All past empires were not “Global” in their reach and control. Period!

There are only two factors that will trigger the collapse of an empire:

- Money (financial) Power; and
- Military Power

**Military power** is the “Bully” power to **subjugate** and **oppress** the targeted country or race/ community.

**Money power** is to ensure “**Obedience**” and “**Control**”.

You can argue for all I care, till the cows come home, but if you have “wielded” power and or come into “close contact” with those that wielded power, what I say and reveal is not an issue for argument.

The hidden puppet masters understood the principles and the same was echoed in the words (or phrase) uttered by the Rothschilds. There are so many versions, that I cannot be bothered to quote them.

The above Logarithmic Decay diagram illustrates that decay and collapse is a process and stretches for **years / decades** and any major **military defeats will merely hasten** the collapse. This is sheer common sense.

When an empire is **financially strong** (monopoly financial power) and can sustain and **maintain a huge military** it cannot be defeated.

When an empire is **weak**, corrupt and have **huge debts**, the **rots starts** and the stench will be apparent even at distance. Internal divisions surface, “**warlords**” will aspire to be the “Lord of his Turf” **before** aspiring to be the “**Emperor**”!

External enemies will form alliances to defeat the Empire! **It is as simple as that, at the micro and macro levels. Guaranteed!**

### **Application of the Fundamental Principles**

#### **Illustration – Micro Level**

Why do I say repeatedly that Malaysia is fractured, and the collapse started after Tun Mahathir retired in October, 2003. The decay and process took twenty (20) years if and when you are bothered to count (2023 – 2003). The “Emperor” robbed and plundered the country in the RM Billions from the 1 MDB fiasco! Beyond repair!

Malaysia had five Prime Ministers (“political emperors” not counting Tun Mahathir second premiership) and three political emperors within three years, from 2020 to 2023. But the people cannot be bothered and are clueless, even when three states within the Federation are getting restless. Need I say more?

#### **Illustration – Macro Level**

The collapse of the global Zionist Anglo-American Empire is staring at your face but you cannot see the inevitable consequences.

**Money Power    US\$ Global Reserve Currency – de-dollarisation!**

**Military Power    Houthis, Hezbollah and Hamas giving the middle-finger to the Emperor. Not counting the war in Ukraine and the Pivot to Asia fiasco!**

#### **On Money Power**

The US\$, as a reserve currency, is of no consequences to the ordinary American (the Joe Six-Packs) in the broadest sense of the term.

Why? Three kinds of US\$

- **The US\$ circulating in the USA;**
- **The Euro-dollar; and**
- **The Petro-Dollar**

The bulk of the US\$ Dollars **circulating throughout the world** are in the form of the Euro-Dollar and the Petro-Dollar and Loans to global arseholes denominated in US\$!

- Generally, the Empire controls the entire European continent and imposes obedience and control through the Euro-Dollar financial system.
- Generally, the Empire controls and the rest of the world (including Russia and China) through the Petro-Dollar in relation to the sale and purchase of energy resources – crude oil and gas.

- The bulk of global trade must be paid in US\$.
- All wars waged by the Empire were financed by the world via Foreign Reserves and US I.O.U.s. *i.e.* US Treasuries supposedly the highest (three Stars rating) quality of securities to facilitate in global finance and debts.
- US\$ is a fiat currency and in blunt terms – Toilet Paper Money! The biggest Ponzi scheme and scam ever created and enforced by the FED, Bank for International Settlements (BIS), Bank of England (BOE), the European Central Bank (ECB), the International Monetary Fund (IMF), and the World Bank etc.

### Euro-Dollar Explained (A Summary)

*Eurodollars are U.S. dollars held in time deposit accounts in banks outside the United States, which are not subject to the legal jurisdiction of the U.S. Federal Reserve. Consequently, such deposits are subject to much less regulation than deposits within the U.S. The term was originally applied to U.S. dollar accounts held in banks situated in Europe, but it expanded over the years to cover US dollar accounts held anywhere outside the U.S. Since the Eurodollar market is not run by any government agency its growth is hard to estimate. However, the Eurodollar market is by a wide margin the largest source of global finance. There is no connection with the euro currency of the European Union. (1)*

*The origins of the Eurodollar can be traced back to the post-World War II era. After the Allies were victorious, the Marshall Plan was enacted by the United States to help rebuild Europe. As such, there was a huge influx of U.S. dollars into Europe. European companies and individuals who received those U.S. dollars didn't want to deposit those funds back on U.S. soil (called onshore) and preferred to keep U.S. dollar deposits outside the U.S. (called offshore). Hence, they deposited the money into European banks, and thus, the Eurodollar market was born. It was this dramatic acceleration of foreign capital that paved the way for financial innovation in the form of the Eurodollar market. In the earlier days, the biggest players in the Eurodollar market were European and Asian companies, which preferred Eurodollars as a way to finance their imports from the U.S. The U.S. dollar's position became stronger partly due to an increase in profitable transactions of borrowing and depositing in the Eurodollar market. Other foreign currencies also soon followed suit, creating offshore markets for other major currencies, such as the Japanese Yen, Swiss Franc, and the British Pound, outside of their domestic countries.(2)*

### Petro-Dollar Explained (Summary)

*"Petrodollar" refers to the dollar's role in crude oil transactions. In the wake of the 1973 oil crisis, Saudi Arabia agreed to conduct all oil transactions in dollars and invest its oil surplus funds in U.S. Treasuries in exchange for U.S. military support. The agreement was a boon for the dollar and was critical in cementing the greenback as the world reserve currency. Due to Saudi Arabia's prominent role in the global oil trade, the agreement had a far-reaching effect. As a result, virtually all of the world's global oil transactions were priced in dollars. This ensured a constant demand for dollars. Every country needed them to buy oil. This demand for dollars supported the U.S. government's "borrow and spend" policies, along with its massive deficits. As long as the world needed dollars for oil, it guaranteed the demand for the greenback. That meant the Federal Reserve could print more dollars and issue more Treasuries than it could have otherwise. As an article published by Nasdaq.com reported, the agreement created a "captive market" for U.S. government debt.(3)*

*One of the core staples of the past 50 years, and an anchor propping up the dollar's reserve status, was a global financial system based on the petrodollar – this was a world in which oil producers would sell their product to the U.S. (and the rest of the world) for dollars, which they would then recycle the proceeds in dollar-denominated assets and while investing in dollar-*

*denominated markets, explicitly prop up the USD as the world reserve currency, and in the process backstop the standing of the US as the world's undisputed financial superpower.”(4)*

## **Recent Developments – Financial Implications**

On Sunday, June 9, 2024, the Petro-Dollar agreement expired, and it was not renewed by Saudi Arabia. The practical effect is that the Saudis can sell oil in currencies other than the dollar. It does not mean Saudi Arabia will stop accepting dollars for oil as other countries may be compelled to continue paying in US\$ for oil, with the attendant foreign exchange risks. But, if the Saudis dare move away from the dollar, other countries will find it easier to follow the trend.

According to Russia's *Sputnik* news service, “Nearly 80 per cent of global oil sales are priced in dollars. However, Russia, Iran, Saudi Arabia, China, and others are increasingly shifting to local currencies in energy trade. In 2023, 20 per cent of global oil was bought in other currencies, as per the Wall Street Journal.”(3)

However, many analysts missed the fact that the UAE received payment for an oil trade without converting local currencies to dollars for the first time, when India top refinery paid for crude in rupees. India has also bought oil from Russia without using dollars.

Sputnik explained it this way:

“If world players significantly reduce the use of U.S. dollars, the U.S.'s ability to issue dollar debt and earn dollars for exports will diminish and the nation's economy will shrink, according to international economists.”

The status of the US\$ will not end overnight. But, it is a sign of the inevitable collapse and decay of the Empire, as the de-dollarisation will accelerate at a faster pace. More importantly, one of the most cruel and destructive weapon in the arsenal of the Empire in waging financial warfare is the currency sanctions which has been blunted by countries defying the Empire in global trade without the need for US\$ payments.

The Petro-Dollar is foundation for the currency stranglehold against all countries that oil must be traded in the US\$. This cannot be sustained and or compelled by the Empire anymore!

This is a huge development.

This will also affect the Euro-Dollar market especially the Euro-dollar bond market. I have no time to explain to you this specific market. You have to do the research and read up on your own effort! For the time being, focus on:

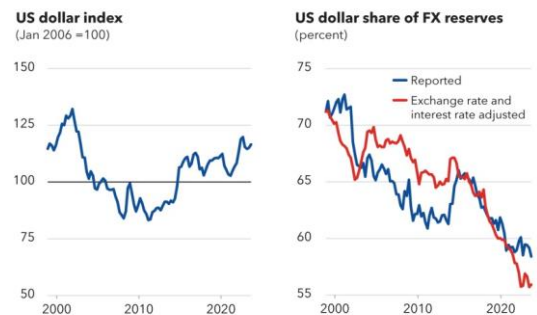

- US\$ will ultimately be devalued.
- The US Dollar lost **98%** of its purchasing power since 1971, according to data from Visual Capitalist. Thus, proving that the unit of American currency has gotten exponentially weaker over time. In 1933, that

same report notes that a single US dollar could purchase ten bottles of beer.

- To shore up the demand for US\$, the FED must increase interest rates so that investors will hold US\$. But, long term bonds will collapse in value (as when interest rates spikes, bond prices plunge).
- US will pay more interest for the debts they would need to incur to sustain the Empire and the military expenditures.
- A double whammy!
- There will be diversification in currency reserves away from US\$

### Stealth erosion

Recent US dollar appreciation has masked the extent of shifts out of dollar reserves.

Note: Federal Reserve Board Trade-Weighted Dollar Index (Advanced Economy).

IMF

IMF has found that “financial sanctions, when imposed in the past, induced central banks to shift their reserve portfolios modestly away from currencies, which are at risk of being frozen and redeployed, in favour of gold, which can be warehoused in the country and thus is free of sanctions risk. IMF also showed that the demand for gold by central banks responded positively to global economic policy uncertainty and global geopolitical risk. These factors may lie behind the further accumulation of gold by a number of emerging market central banks.”

### Gold rebound

Bullion holdings are nearing the highest level since WWII, driven by accumulation of emerging market central banks.

IMF

To conclude this segment of the discussion, I will now draw your attention to the speech of the First Deputy Managing Director of the IMF, Gita Gopinath, wherein she made the following observations:

*Global economic ties are changing in ways we have not seen since the end of the Cold War. After years of shocks—including the COVID-19 pandemic and Russia’s invasion of Ukraine — countries are re-evaluating their trading partners based on economic and national security concerns. Foreign direct investment flows are also being re-directed along geopolitical lines. Some countries are re-evaluating their heavy reliance on the dollar in their international transactions and reserve holdings.*

*Under the surface, there are increasing signs of fragmentation. Trade and investment flows are being redirected along geopolitical lines.*

*Looking at global FX reserves, the most notable development during 2022-23 has been an increase of gold purchases by central banks. Gold is generally viewed as politically neutral safe asset, which can be stored at home and be insulated from sanctions or seizure. It can also be an inflation hedge but cannot be easily used in transactions. This suggests that gold purchases by some central banks may have been driven by concerns about sanctions risk. This is consistent with a recent IMF study confirming that FX reserve managers tend to increase gold holdings to hedge against economic uncertainty and geopolitical including sanctions risk. While rebuilding trust is difficult and may take time, it is critical to avoid the worst outcomes in a rapidly fragmenting world.*

## **Recent Developments – Military Implications**

Please revisit my previous article, **“Putin’s Reverse Cuba Gambit: Moving The Chess Pieces On The Geopolitical Chessboard - Checkmate US, UK and NATO”**. I will now quote the relevant part:

President Putin’s “Reverse Cuba Gambit”

*Russia’s flotilla is presently sailing to Cuba and with a nuclear armed submarine lurking beneath the seas. **Turkey is no longer in play, not a piece on the Chess Board. There can be no exchange as in 1962!***

*Checkmate by Russia, without even making a move, as US / UK cannot move the King or Queen in any direction. The West is totally blocked on the geopolitical chessboard. Checkmate!*

**Now the fun starts!**

US, UK, NATO **has to offer something** and or **beg Russia** to cease military actions.

Russia is at **THE DOORSTEP OF USA** as **in 1962**, just as the Zionist West is using Ukraine to threaten Russia.

**USA is less than three minutes away from a nuclear explosion! President Putin’s Reverse Cuba Gambit in play as you read this article!**

**Now who is shitting bricks???**

## **Conclusions**

At the micro and macro levels, the Logarithmic Decay Diagram illustrates well that the Empire is, heading at a very fast speed, the end of its Money and Military Powers.

Financial collapse will be a slow death by a thousand cuts. Period!

Military defeat will be fast with massive casualties, compounded by a civil war within its boundaries.
