

# Declaration Of War On Financial Scams – The World’s Currency – Digital Currency (Bitcoin etc.)

By Matthias Chang – Future Fast-Forward

I am repeating my declaration of war on all digital currencies promoted decades ago. But I am declaring the war cry again, because my country is being used as an experiment and *the Template* for reviving the British Empire, as Malaysia is an exemplary bulwark for subservience to the dictates of the Zionist British Empire in spite of contrary narratives by politicians.

## Warning

Get out of all digital investment scams! Now!

I had warned the government of this danger before.

Don't go near Bitcoin etc., ever!

## The World Currency

I am now exposing once again, the bankruptcy and the empty idiotic narratives pushed by the so-called financial and political experts and analysts. **This is because they did not sound the alarm bells as I did BEFORE the scam was launched worldwide, in my Intelligence Briefs, Messages, Articles and Videos.**

If there are any arseholes, after the publication of this PDF article, who dare assert that they sounded the alarm, they are liars, conmen and hirelings of the Empire! Help me to help you, your family and the country but, you must demand why these political arseholes did not sound the alarm when the Economist Magazine first promoted the scam.

**In 1988, the plan was already in place that a world currency would be established by central banks in 2018. This is an attempt to “replace” the moribund and declining efficacy of the fiat currency, dominated by the US \$ Reserve Currency.**

**This is how you catch these lying criminals by their silence and hypocrisy.**

Look at the picture again. It is **the Phoenix, and not an eagle**, rising from the burning ashes of fiat currencies, toilet paper money!

Arseholes would not be able to connect the dots and appreciate the full impact of the cover page of the Economist Magazine, the mouthpiece of the British Financial Establishment. The fact that 99.9 % of Malaysians have not read or are subscribers is an indication that the message is not meant for the people but for the SELECTED “enlightened global financial elites” which I can assure you does not include the blurred and self-centred politicians in our parliament.

The so-called analysts, political pundits etc. have misadvised and misled the governments since the retirement of Tun Mahathir Mohamad in 2003, even when he became the Prime Minister again in 2018. These half-baked analysts will be scrambling to dig into what I have exposed here and may even attempt to “back-date” their advice in Bahasa (official government language) to rebut that they were screwed up. But, they will fail!

### **Exposing The Scam**

Arseholes are boasting that they have “invested” in digital currencies like Bitcoin etc. and since time does not permit me to give an extended explanation, just do this!

Demand that they **show** you or **explain**:

- the actual “Coin”;
- where they have kept the “coins” (if any);
- from where or whom they purchased from;
- how did they “mine” the “coins”;
- ask them to explain, what is backing the “coins” i.e. by gold or commodities etc.;
- If there is no backing, then what is it? Is it another type of fiat money?
- Why are central banks promoting “digital currencies” but acquiring on the stealth, physical gold and not “paper gold”;
- If Gold is a “barbaric relic” why China, Russia and members of BRICS are accumulating gold more than other Western central banks?

**In my previous article send out yesterday, I have said that our country has been singled out (on the quiet) to be a “laboratory for experiments” for the global powers that be! We are into “digital currency” in a big way and in warp speed. Why the hurry?**

There are hardly any constructive debates by our politicians in parliament. What do you really know about Central Bank Digital Currency (CBDC) and the political objectives of moving to a “cashless” society?

There is a cliché (I am paraphrasing) that “when housewives are flocking to the stock market, it’s time to get out, as the market is over-heating”.

**Let me create a new cliché, “when hawkers are into digital currency and or payment systems, we are in big trouble”.**

Need I say more?

### **The Plan As Envisaged**

Extracted from the Economists Magazine

Source: *Economist*; 01/9/88, pp 9-10

**THIRTY years from now, Americans, Japanese, Europeans, and people in many other rich countries, and some relatively poor ones will probably be paying for their shopping with the same currency.** Prices will be quoted not in dollars, yen or D-marks **but in, let’s say, the phoenix.**

***The phoenix will be favoured by companies and shoppers because it will be more convenient than today’s national currencies, which by then will seem a quaint cause of much disruption to economic life in the last twentieth century.***

*At the beginning of 1988 this appears an outlandish prediction. Proposals for eventual monetary union proliferated five and ten years ago, but they hardly envisaged the setbacks of 1987. The governments of the big economies tried to move an inch or two towards a more managed system of exchange rates – a logical preliminary, it might seem, **to radical monetary reform.***

*For lack of co-operation in their underlying economic policies they bungled it horribly, and provoked the rise in interest rates that brought on the stock market crash of October. These events have chastened exchange-rate reformers. **The market crash taught them that the pretence of policy co-operation can be worse than nothing, and that until real co-operation is feasible (i.e., until governments surrender some economic sovereignty) further attempts to peg currencies will flounder.***

### ***The new world economy***

***The biggest change in the world economy since the early 1970’s is that flows of money have replaced trade in goods as the force that drives exchange rates. as a result of the relentless integration of the world’s financial markets, differences in national economic policies can disturb interest rates (or expectations of future interest rates) only slightly, yet still call forth huge transfers of financial assets from one country to another. These transfers swamp the flow of trade revenues in their effect on the demand and supply for different currencies, and hence in their effect on exchange rates. As telecommunications technology continues to advance, these transactions will be cheaper and faster still. With uncoordinated economic policies, currencies can get only more volatile.***

*In all these ways **national economic boundaries are slowly dissolving.** As the trend continues, the appeal of a currency union across at least the main industrial countries will seem irresistible to everybody except foreign-exchange traders and governments. **In the phoenix zone, economic adjustment to shifts in relative prices would happen smoothly and***

*automatically, rather as it does today between different regions within large economies (a brief on pages 74-75 explains how.) The absence of all currency risk would spur trade, investment and employment.*

**The phoenix zone would impose tight constraints on national governments. There would be no such thing, for instance, as a national monetary policy. The world phoenix supply would be fixed by a new central bank, descended perhaps from the IMF. The world inflation rate – and hence, within narrow margins, each national inflation rate- would be in its charge. \*\*\*\*\***

*Each country could use taxes and public spending to offset temporary falls in demand, **but it would have to borrow rather than print money to finance its budget deficit.** With no recourse to the inflation tax, governments and their creditors would be forced to judge their borrowing and lending plans more carefully than they do today.*

***This means a big loss of economic sovereignty, but the trends that make the phoenix so appealing are taking that sovereignty away in any case.** Even in a world of more-or-less floating exchange rates, individual governments have seen their policy independence checked by an unfriendly outside world.*

*As the next century approaches, the natural forces that are pushing the world towards economic integration will offer governments a broad choice. **They can go with the flow, or they can build barricades. Preparing the way for the phoenix will mean fewer pretended agreements on policy and more real ones. It will mean allowing and then actively promoting the private-sector use of an international money alongside existing national monies.***

*That would let people vote with their wallets for the eventual move to full currency union. The phoenix would probably start as a cocktail of national currencies, just as the **Special Drawing Right is today.** In time, though, its value against national currencies would cease to matter, because people would choose it for its convenience and the stability of its purchasing power.*

*The alternative – to preserve policymaking autonomy- would involve a new proliferation of truly draconian controls on trade and capital flows. This course offers governments a splendid time. They could manage exchange-rate movements, deploy monetary and fiscal policy without inhibition, and tackle the resulting bursts of inflation with prices and incomes polices. It is a growth-crippling prospect.*

**Pencil in the phoenix for around 2018, and welcome it when it comes. \*\*\*\*\***

**End of extract of editorial of the Economists Magazine**

**The Plan was made over 30 years AGO!**
